Digital Literacy Project

Name: Arnav Garg

Reg No: 24BAI10753

Branch: B.Tech CSE AIML

Year: 2nd Year

Course Code: CSE0001

Date: 31/03/2026

📘 Introduction (100–150 words)

This project was completed as part of the Digital Literacy course to develop essential digital skills required in today's world. As a Student Digital Ambassador, the aim was to create awareness among peers about safe and effective use of digital tools. The project includes five tasks that cover infographic design, building a digital portfolio, exploring online platforms, understanding email etiquette, and learning about cybercrime prevention. Through this project, I gained practical knowledge about using digital tools, maintaining a professional online presence, and ensuring safe online practices.

🎨 Task 1 Write-up (150–200 words)

I created a digital literacy awareness infographic using Canva. The infographic highlights the meaning of digital literacy, useful tools for students such as Google Docs and GitHub, and safe internet practices like using strong passwords and avoiding suspicious links. The aim was to make the design simple and visually appealing so that students can easily understand the concepts. I explored various templates, icons, and layouts available on Canva to design the infographic. One challenge I faced was organizing the information in a limited space while keeping it visually clear. However, the experience was interesting and helped me improve my creativity and design skills.

🌐 Task 2 Write-up (150–200 words)

In this task, I created professional profiles on GitHub and LinkedIn. GitHub is used for hosting and sharing projects, while LinkedIn helps in building a professional network and connecting with industry experts. I updated my profile details such as education, branch, and future goals. Over the next four years, I plan to use GitHub to upload my projects and improve my coding skills. I will use LinkedIn to connect with professionals, explore internship opportunities, and stay updated with industry trends. This task helped me understand the importance of maintaining a professional digital presence.

💻 Task 3 Write-up (150–200 words)

I explored online platforms for coding and collaboration. I created an account on HackerRank and solved a beginner-level problem called “Solve Me First,” which helped me understand basic programming logic. Additionally, I created a Google Form quiz on digital literacy with five questions, including multiple-choice and short-answer types. This form can be used to test awareness among students. These tools are very useful for academic growth as they help in improving coding skills and collaboration. Overall, this task enhanced my understanding of digital tools used in learning and teamwork.

📧 Task 4 Write-up (100–150 words)

Digital communication plays an important role in professional life. A poorly written email without a proper subject line or respectful tone can create misunderstandings or be ignored. For example, if a student writes an informal email to a professor without proper structure, it may appear unprofessional. This can be avoided by using a clear subject line, polite language, and proper formatting. Through this task, I learned the importance of professional communication and email etiquette.

🔐 Task 5 Write-up (100–150 words)

While researching phishing, I was surprised to learn how easily people can be tricked into sharing sensitive information through fake emails and messages. Many users fail to verify links and fall victim to scams. This made me realize the importance of being cautious online. As a result, I will always verify links, avoid sharing personal information, and enable security features like two-factor authentication to stay safe.

📄 Conclusion (100 words)

This project helped me develop essential digital literacy skills required in today's world. I learned how to create digital content, build a professional online presence, use collaboration tools, communicate effectively, and stay safe online. These skills will be very useful in my academic and professional journey. Overall, this project was a valuable learning experience.
